

Pneumatic Rotary Actuator

IT'S THE DETAILS THAT MAKE THE DIFFERENCE...

twintorque[®]

High-performance pneumatic actuators

Company profile

Airpower in Dattenberg near Linz am Rhein, located between Bonn and Koblenz, is your independent partner for pneumatic and electric rotary actuators as well as industrial valves designed for the process industry and plant construction.

The company headquarters were part of an investment, made in 2019, with a new 5000 sqm building complex comprising spacious administration, storage, and production areas.

As an independent company, we offer comprehensive and professional technical advice and support in matters of engineering and customer service. Our technical support is geared towards specific project-related requirements targeting optimal cost-benefit ratio. We attach great importance to personal contact. We are committed to support you! An experienced team ensures your absolute satisfaction. Well-engineered product technology, designed and produced according to international standards and norms, guarantees absolute safety.

We have international approvals according to DIN EN ISO 9001-2015, ATEX, SIL3, EAC etc. Our employees, either in Sales, Construction, Purchase or Assembly make sure that orders are processed smoothly and quickly. We deliver over 10.000 pneumatic actuators from 4 to 13.000 Nm from stock. Our program includes manually operated and fully automated industrial valves from nominal width DN10 to DN1400. Upon request from customers we also deliver special designs with the help of our construction department.

Thus, along with the standard 90° swivel angle, we also supply actuators with different angles such as 120°, 135°, 180° and 3-position actuators (metering unit) as well as Scotch-Yoke actuators.

Our global sales market includes complete European area, Scandinavia, the Middle East, Africa. Asia and South America. Professional closeness to our customers is highly important for us. Benefit from our expertise!

You can send us an e-mail or call us at:

E-Mail: sales@airpower-gmbh.com

Fax: +49 2644 40697 99

Applications

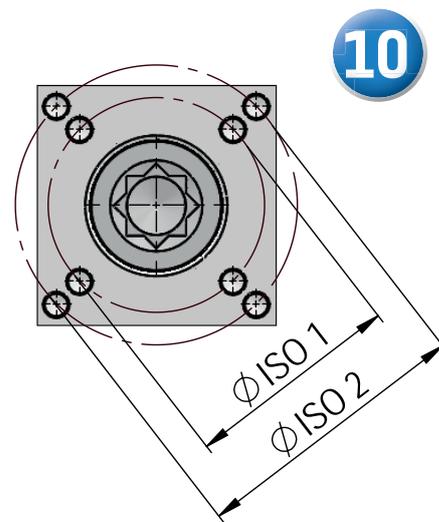

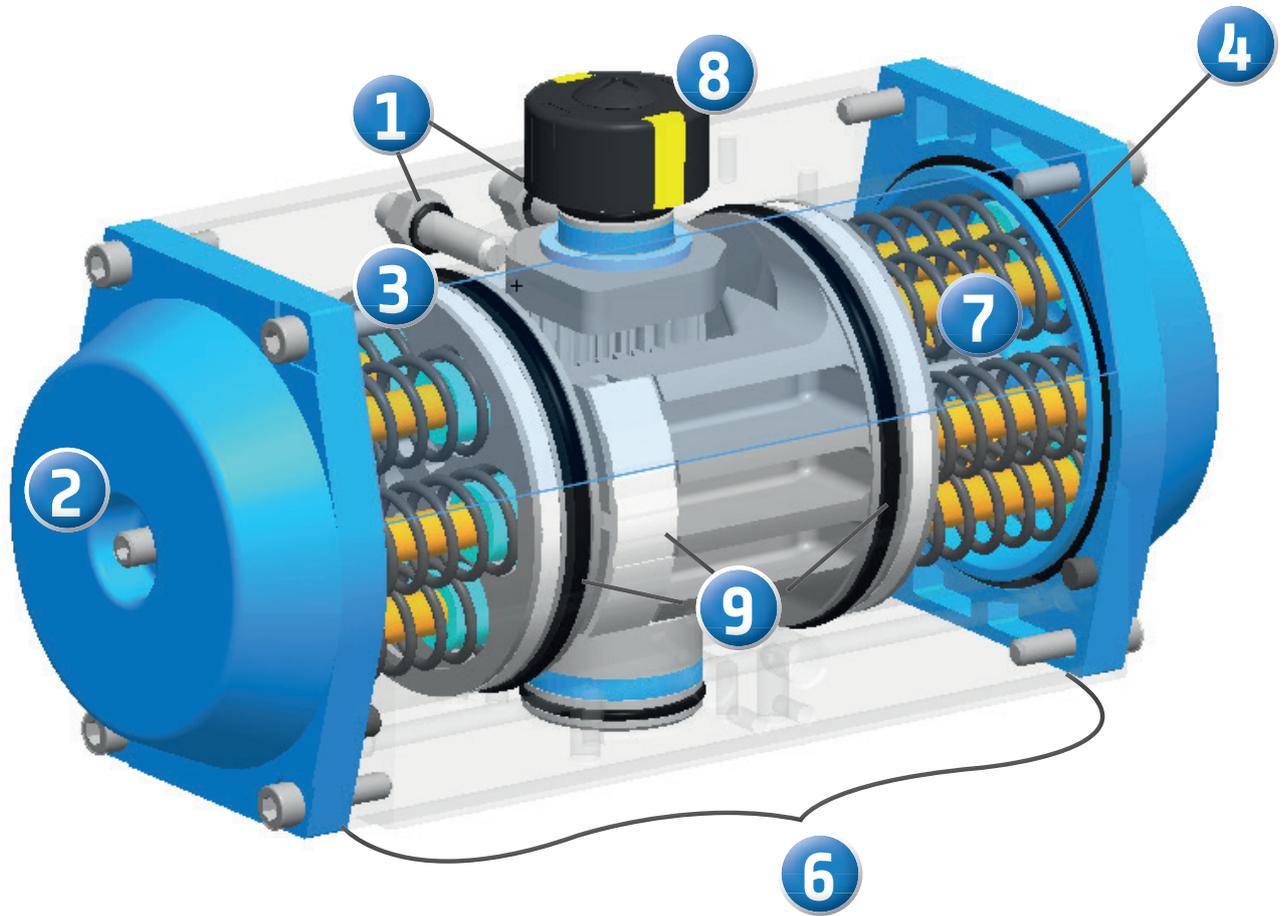

Renewable energies, solar technology, environmental protection, water treatment, distribution, disposal, filter and process technology, bulk goods, food, paper and pulp, chemical and petrochemicals, biotechnology and pharmaceutical industry, mining and mine technology, maritime/offshore, plant and mechanical engineering, steel and metallurgical engineering, process automation, process engineering, valve manufacturers, vehicle and rail technology, sugar industry and many more.

airpower europe

Advantages/Benefits

Advantages/Benefits

<p>1. End position adjustment</p> <p>For the versions APD/APS-040 to 400, two end positions can be set separately in range from +5° to -5° using two independently acting adjusting screws. For butterfly valves: The valve disc achieves complete sealing before reaching full closure.</p> <ul style="list-style-type: none"> • Extended service life due to less abrasion. Lower torque value and more economic actuator selection. • For ball and plug valves: The open position can be set exactly, avoidance of turbulent flow of the medium and cavitation. 	<p>6. Design features</p> <p>Same dimensions for both double and single-acting actuators with a 90° swivel angle. 180° swivel angle adjustable from 120° to 180° Low capital commitment due to the fact that only double-acting actuators have to be stocked and single-acting actuators can be produced by the easy installation of safety springs.</p> <ul style="list-style-type: none"> • Simple, safe handling and adjustment to the existing control pressure thanks to captive springs. • Covering a wide range of applications.
<p>2. Stroke limiter</p> <p>In addition to the end position setting twintorque has a stroke limitation setting in one direction (open or close) as a standard for versions APD/APS-050-210. This allows modification of the swivel angle. Version APD/S 240-400 on request.</p> <ul style="list-style-type: none"> • With the additional stroke limitation, the flow rate can be set reproducibly for butterfly valves and seals. • Cost savings as special solutions are not required. (e.g. special switching cams or electrical solutions) 	<p>7. Corrosion protection: airpower – safety springs</p> <p>The captive springs are plastic coated. Stainless steel guide sleeves.</p> <ul style="list-style-type: none"> • Long service life thanks to good corrosion protection. • starting from APS-070 free of non-ferrous metals. • reduced service and maintenance costs. • No risk of an accident.
<p>3. Corrosion protection: Piston</p> <p>The die-cast pistons aluminum pistons are hard-anodized or galvanized from cast steel.</p> <ul style="list-style-type: none"> • Functional reliability even when using critical control media. • Long service-life. 	<p>8. Position indicator</p> <p>The position indicator included in the scope of delivery is designed in such a way that signaling devices can be mounted directly on the actuator in accordance with the NAMUR interface VDI / VDE 3845.</p> <ul style="list-style-type: none"> • Use of inexpensive standard components. • Fast, inexpensive construction of signal devices. • Position indicator visible from far.
<p>4. Silicone free</p> <ul style="list-style-type: none"> • Can also be used in areas where PWIS-free actuators are required e.g. paint-shops. 	<p>9. O-ring and bearings</p> <p>The standard seals can be used from -35° to +80°C.</p> <ul style="list-style-type: none"> • Wide temperature range, optionally -55 °C or 200 °C. • Inexpensive maintenance through simple replacement of sealing and wearing parts.
<p>5. Corrosion protection: Housing + Caps</p> <p>The aluminum housing is hard anodized as standard and also PE-coated on the outside. Screws are stainless steel.</p> <ul style="list-style-type: none"> • The die-cast aluminum caps are powder-coated. • Applicable in almost all environmental conditions, including critical ones. 	<p>10. ISO 5211 Flanschbilder (Schnittstelle Antrieb/Armatür)</p> <p>ISO 5211 flange interfaces (actuator/valve interface) Two ISO 5211 flange interfaces with double square per actuator size. Cost savings through flexible automation of valves.</p>

Technical Specifications

	Standard design	By request
Design	Pneumatic double piston – rotary actuator Type APD = double acting /Type APS = single acting	3-position actuator (3P) 0°-90°-180°, 0°-45°-90° Quick-acting actuator Scotch-Yoke Actuators
Construction features	Double-piston rotary actuator based on the rack and pinion principle with self-centering piston guide in the housing. Single-acting: with captive safety springs	
Mounting position	Any	
Standards	Connection Actuator signaling devices: in accordance with VDI/VDE 3845 (NAMUR) Connection: actuator/control valve: in accordance with NAMUR or VDI /VDE 3845 Connection actuator/valve: Standardized flange interface on the body as well as pinion with inner-square (double square) in acc. with EN ISO 5211	Different interface dimensions possible Pinion with two flats in acc. with EN ISO 5211 or according to customer requests
Guidelines/ Approvals	ATEX product line 2014/34/EU EC-Machinery Directive 2006/42 CE, EAC, SIL3	
Materials	Housing: AL-alloy hard anodised, coated on the outside, RAL9010 Caps: AL-alloy, coated, RAL5015 Piston: AL-alloy, hard anodised (APD/S-040-210), APD/S-240-400 steel coated Pinion: Steel, corrosion protected (C-steel AISI 1045) Seals: NBR (Perbunan) Bearings: Plastic, POM (Delrin) Screws: Stainless steel, AISI 304	Various cap colors possible Stainless steel actuator made of V4A Pinion: stainless steel AISI 304 or AISI 316
Ambient temperature	-35° to +80°C	High temperature version: -15° to + 140° C Higher temperatures up to +250° C Low temperature version: -55° to +70° C
Nominal swivel angle	Double and single acting: 0° / + 90°, adjustable from +5° to -5°.	120 ° swivel angle 135 ° swivel angle 180 ° swivel angle Also adjustable in one direction +5° to -90°, for sizes APD / APS-240-400 on request
Torque	3,1 Nm to 13.022 Nm	Higher torque
Control pressure	2 to 10 bar	Higher control pressure on request
Control medium/ Quality	Filtered air minimum acc. To DIN/ISO 8573-1, Class 4	Other non-aggressive, gaseous or liquid media

Criteria for actuator dimensioning

	Dimensioning example	
	Double acting	Single acting (spring return)
Which mode of operation is required for the quarter-turn actuator?	Safety position in the event of air failure is not required.	Required safety position of the valve in the event of air failure.
Minimum control pressure on the actuator?	Minimum control pressure= 5 bar	Minimum control pressure= 5 bar
What is the break-away torque of the valve?	Breakaway torque of the valve specified by the manufacturer = 40 Nm	Breakaway torque of the valve specified by the manufacturer = 35 Nm
Is the breakaway torque with or without a safety factor?	Safety factor (+ 30%) 40 Nm + 30% = 52 Nm	Safety factor (+ 30%) 35 Nm + 30% = 45 Nm
Selection results	The double-acting actuator, which reaches at least 52 Nm at 5 bar control pressure, is the APD-080	The single-acting actuator, which reaches at least 45 Nm at 5 bar control pressure, is the APS-090 with 10 springs

Standard version / 90°, 180°

Stainless steel version / 90°

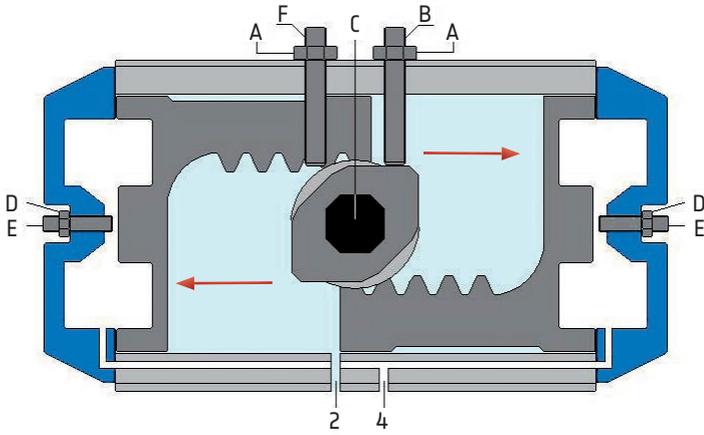

3-position version /
0° -90° -180°, 0° -45° -90°

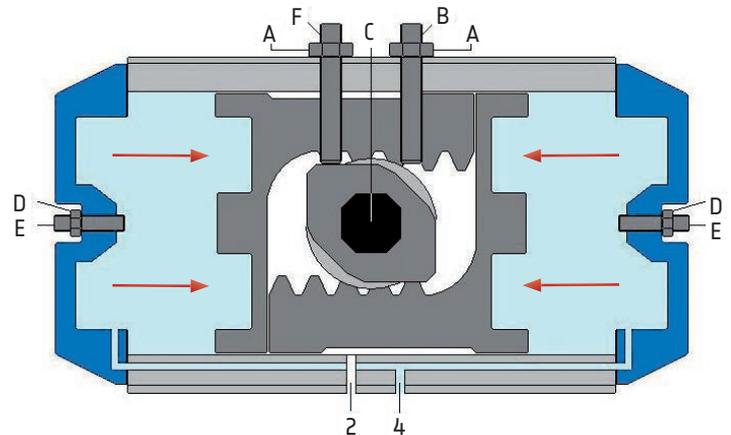

Scotch-Yoke version / 90°

Double acting function

Switching position 90°

Basic position 0°

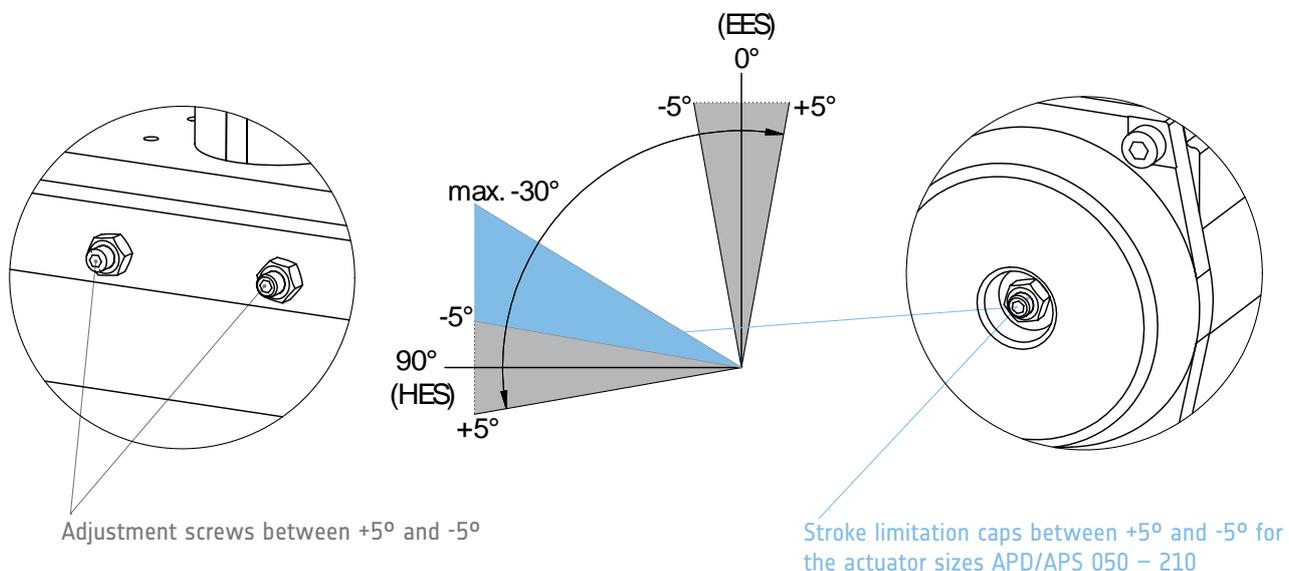

When pressure is applied to connection "2", the two pistons move from the 0° basic position towards the 90° switching position.

The force of both pistons is transmitted to pinion „C“ via the piston racks. When the pistons are pressurized via connection „4“, the pistons move towards each other into the basic position 0°

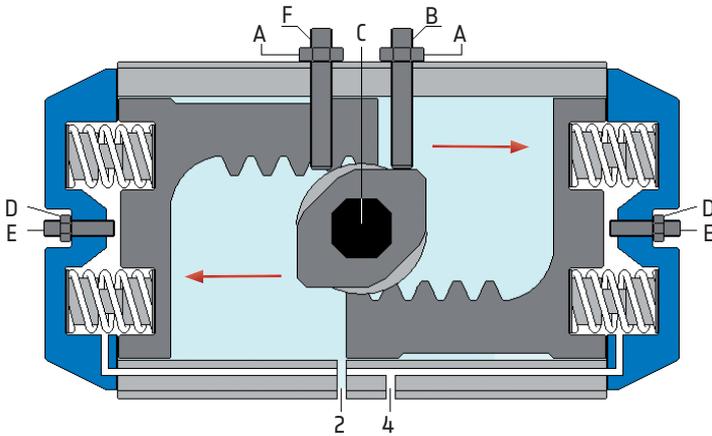

End position adjustment

In both end positions, the swivel angle can be set between +5° and -5° with the end position adjusting screws (EES) in a depressurized state. In addition, the nominal swivel angle of the switched drive (90 °) can be set using the stroke adjustment screws (HES) in the cover (optional by + 5 ° to max. -90 °)

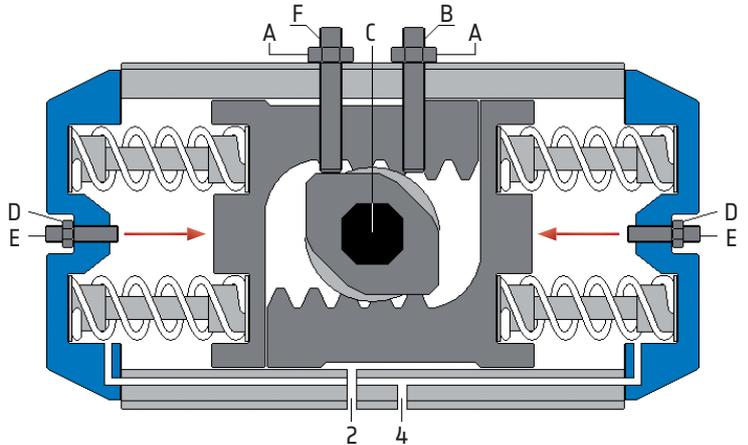

Single-acting function

Switching position 90°

Basic position 0°

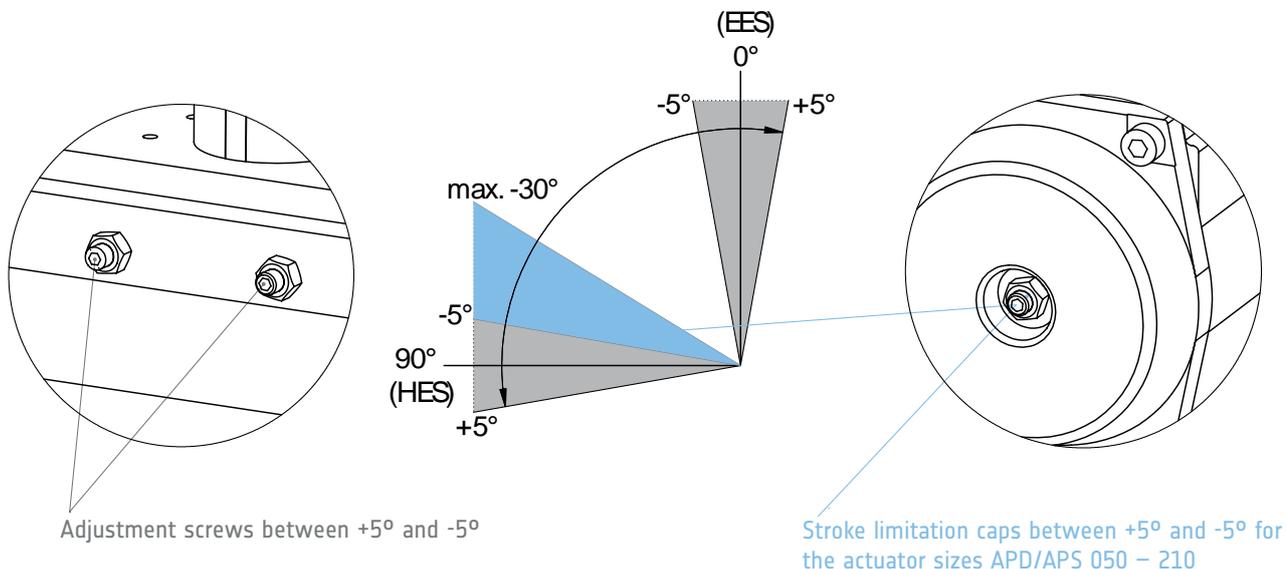

When pressure is applied to connection "2", the two pistons move from the 0° basic position apart into the 90° switching position and tension the springs.

When the inner chamber is vented via port '2', the springs return the pistons to 0° basic position. The number of springs (4 to 16 springs) must be adapted to the existing control pressure.

End position adjustment

In both end positions, the swivel angle can be set between +5° and -5° with the end position adjusting screws (EES) in a depressurized state. In addition, the nominal swivel angle of the switched drive (90 °) can be set using the stroke adjustment screws (HES) in the cover (optional by + 5 ° to max. -90 °)

400	7,50	7,50	11,1	8,70	

- * ▶ The specified switching times are guide values at 6bar control pressure directly on the actuator without load! At high switching speeds of the valve, impermissibly high braking forces can occur in the end positions of the actuator, which can lead to mechanical destruction of the actuator. Corrective action through throttling (supply or exhaust air) directly on the actuator or by selecting a bigger actuator!
- ▶ The switching times of the single-acting actuators are all indicated with 12 built-in springs!
- ▶ The actuator sizes APD / S-040-240 were controlled via a 1/4" NAMUR solenoid valve with a flow rate of 1250 NI/min and a supply air hose (length 2 m) with an inner diameter of 6 mm.
- ▶ The actuator sizes APD / S-270-400 were controlled via a 1/2 "NAMUR solenoid valve with a flow rate of 3000 NI / min and a supply air hose (length 2 m) with an internal diameter of 8 mm
- ▶ The switching times were determined with unthrottled actuators!

Air consumption

Double acting, type APD: 1 stroke corresponds to 1x OPEN (0° -90°) and 1x CLOSE (90° -0°)

Calculation basis: Calculation basis: Average atmospheric pressure of 1013 mbar at an ambient temperature of + 20° C

Mounting variants actuator assembly „parallel to the pipeline”

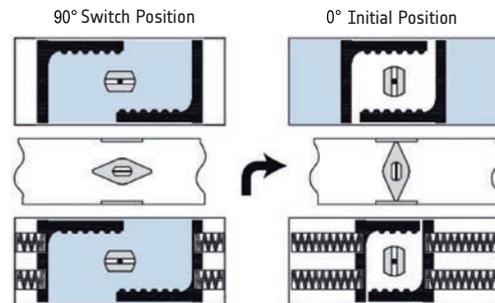

Mounting variant: H (double + single acting)

Safety position: spring force closes, clockwise

0° Initial Position

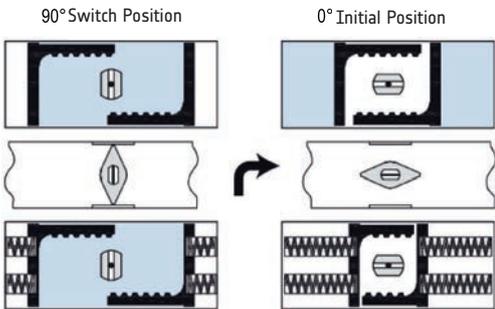

Standard: clockwise „CLOSED”
according to DIN EN 15714-1

Mounting variant: G (double + single acting)

Safety position: **opening** by spring force, clockwise

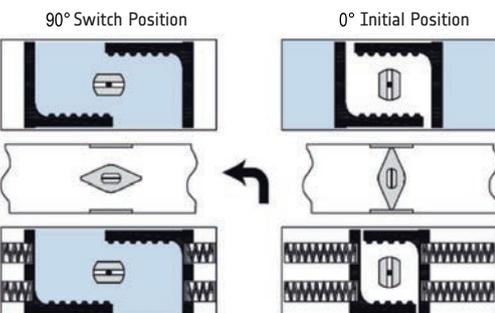

0° Initial Position

Mounting variant: E (double + single acting)

Safety position: spring force closes, **counterclockwise**

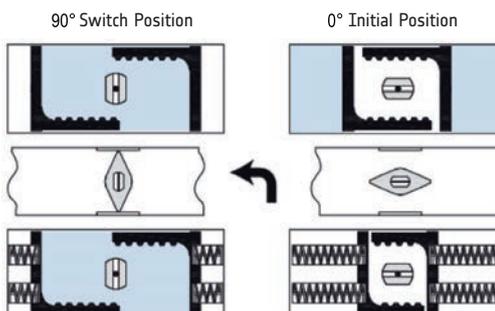

0° Initial Position

Mounting variant: F (double + single acting)

Safety position: **opening** by spring force, **counterclockwise**

0° Initial Position

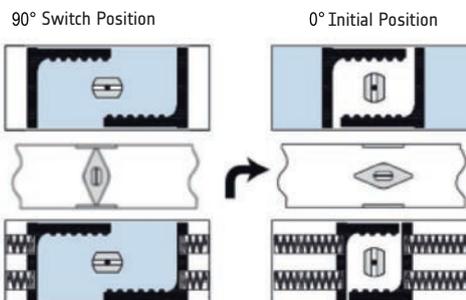

Mounting variants actuator assembly „across the pipeline”

Mounting variant: H (double + single acting)

Safety position: opening by spring force, clockwise

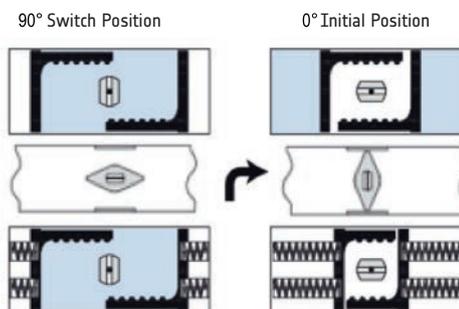

0° Initial Position

Mounting variant: G (double + single acting)

Safety position: spring force **closes**, clockwise

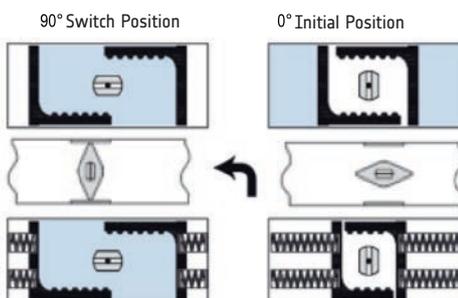

0° Initial Position

Mounting variant: E (double + single acting)

Safety position: opening by spring force, **counterclockwise**

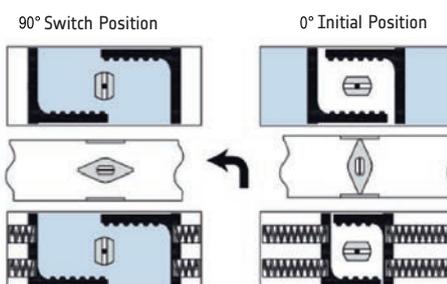

0° Initial Position

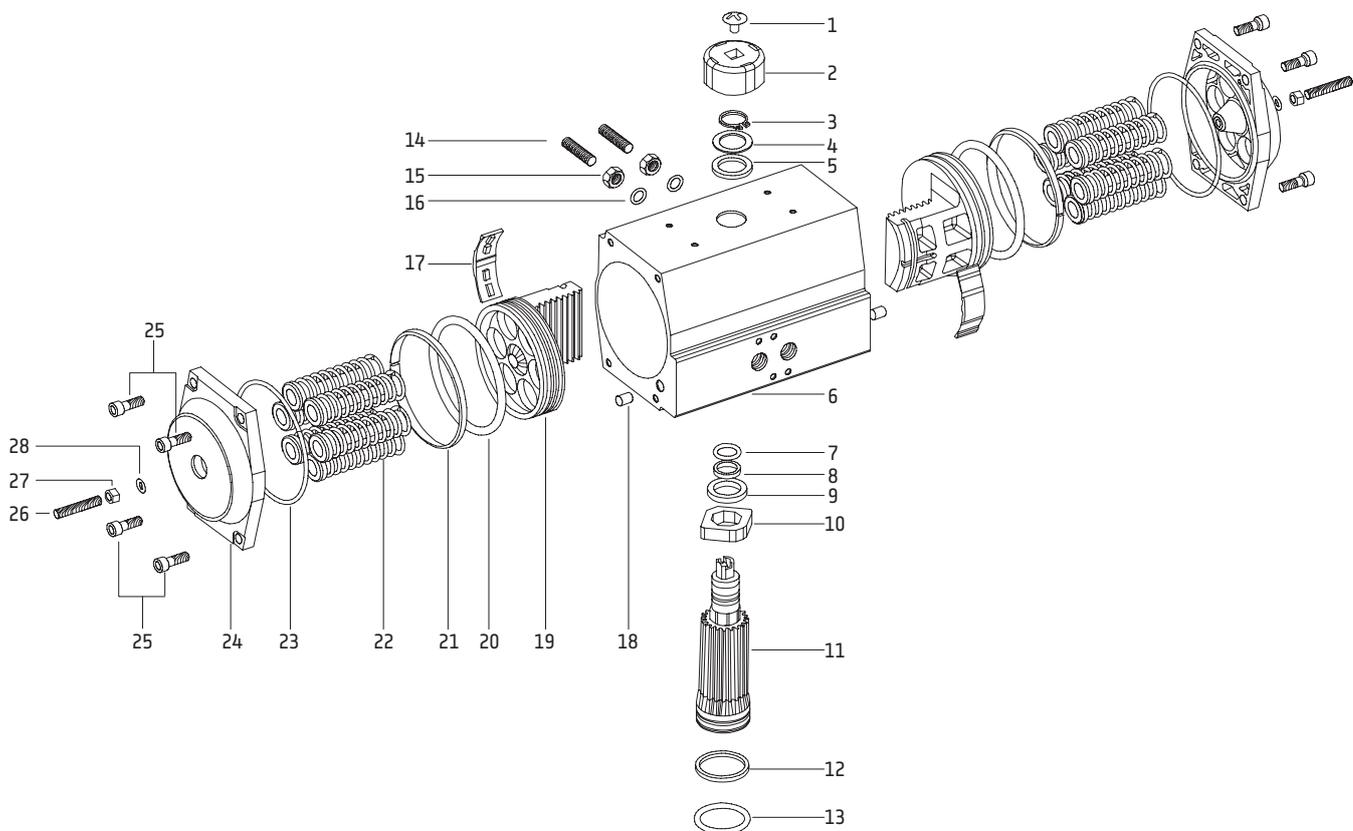

Mounting variant: F (double + single acting)

Safety position: spring force **closes**, **counterclockwise**

0° Initial Position
